

THE COST & COMMITMENT UP FRONT

Your shop. Your brand. Your payments.

A guided setup with BlueRipple Prime. Review the offer together, pay the agreed setup retainer, then configure your independent storefront on our iPad.

ONGOING INFRASTRUCTURE

\$5-15 USD / month

Planning allowance for a small shop

PLATFORM SALES COMMISSION

0% proposed

Payment processor fees still apply

Setup retainer: agreed in your written quote

BlueRipple must specify the amount, currency, total build fee, whether the retainer is credited, support fees and cancellation/refund terms before you pay.

Payment fees are separate. For a Mexico Stripe account, standard domestic online card pricing is 3.6% + MXN \$3 per successful charge, plus applicable IVA on fees. Example: MXN \$1,000 sale = MXN \$39 + IVA processing fee. PayPal has its own pricing. [1]

Your address: jsecards.bluerippleprime.com

Requested address; domain activation is pending. A BlueRipple subdomain requires no new domain purchase; the parent domain remains under BlueRipple control.

01 / BEFORE WE MEET

Bring these. We handle the build.

Have these ready on your phone, laptop or a shared file link. You do not need to write code or create a GitHub account.

01

Owner contact & shop identity

Owner name, email you control, phone, shop name, business country, preferred currency, public support contact and shipping origin.

02

Brand kit

A logo or brand image, preferred colors, a short shop description and permission to use the images. PNG or SVG logos work well.

03

Inventory & photographs

CSV or spreadsheet with SKU, card title, set, condition, grade/certification, price, currency and quantity. Provide front/back photos or stable image links for each item.

04

Store policies

Shipping regions and rates, local pickup details, returns/cancellation terms, customer support contact, privacy notice and applicable tax/invoicing requirements.

05

Your own phone & provider access

Access to your email, MFA/verification codes and existing Stripe or PayPal account if you have one. Bring a billing card and payout bank details for provider-hosted setup.

Keep sensitive details with the provider

Do not email us passwords, full card numbers, identity scans or bank credentials. Enter those directly into Stripe, PayPal or your cloud provider.

02 / AT THE IPAD

Four steps, together.

The production flow below is the intended experience. The current configurator is a demonstration and does not collect payments or create accounts.

01

Review the offer and pay the retainer

Read the scope and commercial terms. Accept the final agreement, then pay BlueRipple on its hosted checkout page. You receive a BlueRipple payment receipt.

02

Enter your shop details

Add your name, logo, shop address, currency, policies and inventory. Review the storefront preview. The form validates missing prices, duplicate SKUs and photo references before import.

03

Authorize your accounts

Connect your shop-owned Stripe account, optionally PayPal, and hosting. Complete identity/bank checks on provider pages. Invite BlueRipple using limited permissions, then enable MFA.

04

Review and approve launch

Check products, stock, shipping, taxes, support details and receipts. Approve the site only after payment, inventory and security checks pass. We hand over your owner access.

A realistic 15-minute target

Branding and a preview can be ready quickly from a prepared template. Live sales also depend on provider approval, verified accounts, inventory quality, DNS/TLS and final checks. These may extend beyond the meeting.

03 / BUY NOW & RECEIPTS

Two payments. Clear ownership.

YOUR SETUP PAYMENT

Shop owner pays BlueRipple's agreed retainer. The receipt identifies BlueRipple as the service provider.

YOUR CUSTOMER SALES

Customers pay your shop. Funds settle to your connected merchant account under that provider's payout schedule.

Buy now

Opens the shop checkout after the server checks prices, shipping and available stock.

Cards, Link & Apple Pay

Stripe handles checkout. Eligible methods appear based on account country, currency, browser and device. Apple Pay is not guaranteed on every device.

PayPal

Optional separate PayPal checkout for JSE in Mexico. Stripe-native PayPal is restricted to supported European merchant countries and does not support Connect direct charges. [2]

Receipts & confirmation

Collect a customer email, enable successful-payment receipts in each Stripe account, and send a separate shop order confirmation after payment verification. PayPal payments need the corresponding PayPal confirmation. [3]

Payment receipts are not automatically tax invoices

A processor receipt proves payment. Fiscal invoices, including any required Mexican CFDI workflow, need a separately agreed accounting solution. Optional invoice products can add fees.

04 / ACCESS, SECURITY & OWNERSHIP

You authorize. We configure.

Recommended: your shop owns its payment and hosting accounts. BlueRipple owns the reusable template and controls the preview subdomain. Source licensing and handoff rights belong in the agreement.

Stripe / PayPal

Complete identity verification and payout bank setup yourself. Grant only the access needed for integration; no shared password or bank-change access.

Cloud hosting

Add billing directly with the provider. Grant scoped deployment access. If scope cannot isolate this shop, use a dedicated account.

Domain / email

BlueRipple configures its subdomain and email DNS. For your own domain, supply DNS access or add the records we give you.

Admin / inventory

Approve named staff accounts and MFA. Authorize inventory import and image use. Shop records and customer data stay out of the public template repo.

Production safeguards

Separate secrets and inventory per shop; server-side totals; atomic stock reservations; signed, deduplicated payment webhooks; protected admin routes; audit logs; backups and a tested restore. No card numbers in our database.

On a shared iPad, complete sensitive steps on your own phone. The production flow must use short-lived sessions and clear client details between appointments. Revoke temporary access after handoff.

05 / WHAT YOU RECEIVE

A launch you can verify.

01

Storefront & owner access

Approved branding, product catalog, mobile layout, inventory editor and named administrator access.

02

Working payments & receipts

Successful, declined, cancelled and refunded test scenarios; owner-approved live verification; no duplicate orders on repeated callbacks.

03

Operational handoff

Order notification and tracking flow, receipt settings, provider billing links, backup/restore instructions and an agreed support contact.

Recommended platform & costs

GitHub template + Cloudflare Workers, D1 database and R2 images. Workers Paid starts at \$5/account/month; \$5-15 is a planning allowance including modest email/operations, within usage allowances. Tax, overages, domain renewal, support and payment fees are extra. [4,5,6]

Postgres alternative: Supabase Pro starts at \$25/month; with Workers, budget about \$30/month before extras. Use it if Postgres, built-in auth or richer database tooling justify the additional cost. Home-hosted SQLite avoids a managed database subscription but adds uptime, patching and recovery responsibility; it is not our recommended launch dependency. [7]
